

Microblading Aftercare Instructions

Trisha Archer
Permanent Make-up Specialist
951-712-6227

Proper care following procedure is necessary to achieve the best results.

Immediately following your eyebrow procedure:

- DO NOT GET WET FOR 10 DAYS
- Apply ointment prior to showering or bathing and blot ointment off when done.
Do not over lubricate area.
- After 48 hours, clean eyebrow with a damp Q-tip once daily. If desired, grapeseed oil may be applied to keep eyebrows soft and minimize the scabbing effect (You will scab a little).
- **Absolutely no picking, scrubbing or exfoliating** of treated area, allow it to flake off on its own.
- Do not expose treated area to the sun or tanning beds.
- Absolutely no soaps, cleansing creams or chemicals. (Including Retin-A, Glycolic acids, anti-aging or anti-acne).

**Remember, failure to follow post-treatment instructions
may cause loss of pigment, discoloration or infection.**

NOTE: Colors appear brighter and more sharply defined immediately following the procedure. As healing progresses, color will soften. Final results cannot be determined until healing is complete. A \$50 follow-up appointment is required 30 days after your initial appointment to fine-tune your results and make any desired adjustments.

Healing schedule for eyebrows

- Day 1-2: The eyebrows are approximately 25% bolder and darker than they will appear when healed. Your skin is red under the pigment, which causes the color to appear darker and warmer toned. Any swelling will subside. Exfoliation, which begins in a few days will cause the excess pigment on the eyebrows to flake away.
- Day 3: Eyebrows will start to itch and appear a bit thicker in texture. Natural exfoliation begins. Do not exfoliate yourself.
- Day 4: The skin begins to flake – peeling from the outside edges first.
- Day 5 – 7: Color finishes flaking off and new skin will heal over the pigment area resulting in a softer appearance of your eyebrows. Color may appear “dull” for a few days until color clarifies.
